

# The Broncobots Bulletin.

## 1 Down 1 To Go

3/22/25 - In early March, The Broncobots competed at the Central Missouri Regional. Ranking ninth and captaining the seventh seed alliance, Broncobots continued to set a shining example both on and off the field. Through our Robot Rescue Program, Team 1987 had the opportunity to assist three teams and lend a hand to many more. Our Impact and Scouting teams went out in full force, impact giving presentations and scouting keeping tally of each match. Broncobots' Christopher S. and Jackson R. also served as Dean's List Nominees, completing interviews for the award. In the end, the team came away with the Industrial Design Award, and Jackson R. won the Dean's List Finalist Award moving on to compete at the next level in the *FIRST* World Championship in Houston.

## This Week @ The Shop

This week, Broncobots continued to innovate and explore new ways to make *Riptide* even better as our second competition draws closer.

## Meet Riptide!

Introducing the 2025 Broncobots robot Riptide. This year the Broncobots opted for a sideways elevator design that allows scoring opposite the intake while a fully integrated arm allows rapid scoring of both coral and algae. An "everybot" inspired climber provides endgame deep cage climbing abilities. Catch us next week and the Greater Kansas City Regional!

## Calendar

- March 27-29: Greater Kansas City Regional
